

Feasibility Study for the Western Franchise of GAS

Project	B016: Integrated Gas Gathering, Processing & Transportation Study
Client	BG Gas Nigeria
Country	Nigeria
Project-Period	2009 - 2010

Purpose:

The BG Nigeria group, in its effort towards fulfilling its obligations under its Downstream Memorandum of Understanding with NNPC, implemented a Feasibility Study to evaluate options for the development of integrated gas gathering; processing and transportation infrastructure to meet gas demand in the Nigerian Gas Master Plan.

Technical data:

1. Ajaokuta Steel Company Ltd
2. Niger Delta Power Holding Company Ltd
3. Delta Steel Company, Aladja
4. Delta Integrated Development Programme

Undertake a market survey aimed at obtaining a more detailed understanding of the potential customers current and future gas needs and an understanding of plans they may have as to how such needs may be met by meeting with appropriate persons in the different organisations.

SeWa Services:

- Collection of historical operating data of the companies relating to demand
- Collection of potential customers' data. This includes gas composition and utilization
- Collection of pictorial data: A key input into gas demand estimation is having a clear understanding of the extent of preparedness of potential to receive gas
- Meeting with the potential customers and completion of customer questionnaire
